HEX NHS ester, 6-isomer

http://www.lumiprobe.com/p/hex-nhs-ester-6

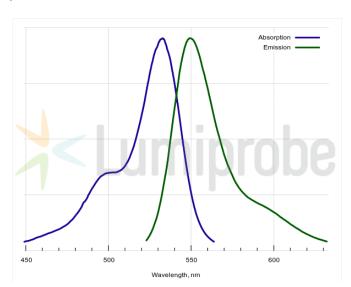

Activated NHS-ester of HEX (Hexachlorofluorescein) dye, a pure 6-isomer. This NHS ester is an amine-reactive dye for labeling of amine groups in proteins, peptides, amino-modified oligos, and other target molecules.

HEX is a hexachlorinated derivate of the fluorescent dye fluorescein. HEX exhibits an excitation peak at 533 nm and an emission peak at 549 in the green-yellow area. It can serve as a substitute for JOE, BODIPY $^{\text{TM}}$ 530/550, VIC $^{\text{TM}}$ because of their similar spectral characteristics.

HEX NHS ester is widely used in nucleic acid sequencing, PCR/qPCR, and related research.

Structure of HEX NHS ester, 6-isomer

Absorption and emission spectra of HEX

General properties

Appearance: light orange powder

Molecular weight: 680.06

CAS number: 2129651-79-0 Molecular formula: $C_{25}H_9Cl_6NO_9$

Solubility: very soluble in DMSO, DMF

Quality control: NMR ¹H and HPLC-MS (95+%)

Storage conditions: 12 months after receival at -20°C in the dark. Transportation: at room temperature

for up to 3 weeks. Desiccate. Avoid prolonged exposure to light.

Spectral properties

Excitation/absorption maximum, nm: 533 ϵ , L·mol $^{-1}$ ·cm $^{-1}$: 87770 Emission maximum, nm: 549 Fluorescence quantum yield: 0.57 CF_{260} : 0.30 CF_{280} : 0.13
