

Pregnenolone-d4

<http://www.lumiprobe.com/p/pregnenolone-d4>

Pregnenolone is a neurosteroid that serves as the precursor to all other neurosteroids found in the brain. Pregnenolone (PREG) is synthesized from cholesterol by the cholesterol side-chain cleavage enzyme (P450scc) and then is metabolized into different neuroactive steroids. It has various effects on brain function, including modulation of myelination, neuroinflammation, neurotransmission, and neuroplasticity. Pregnenolone demonstrates promise in the treatment of schizophrenia/schizoaffective disorder, Alzheimer's disease, bipolar disorder.

Structure of Pregnenolone-d4

General properties

Appearance: white crystals

Molecular weight: 320.51

CAS number: 61574-54-7

Molecular formula: C₂₁H₂₈D₄O₂

Solubility: DMSO

Quality control: NMR ¹H and HPLC-MS (95+ %, D: 98+ %)

Storage conditions: 24 months after receipt at -20°C in the dark. Transportation: at room temperature for up to 3 weeks. Desiccate.

Legal statement: This Product is offered and sold for research purposes only. It has not been tested for safety and efficacy in food, drug, medical device, cosmetic, commercial or any other use. Supply does not express or imply authorization to use for any other purpose, including, without limitation, in vitro diagnostic purposes, in the manufacture of food or pharmaceutical products, in medical devices or in cosmetic products.
